A legendary sound that has marked the evolution of modern rock guitar and has influenced some of the greatest guitarists of our time. Jimi Hendrix was fundamental in the development of modern guitar amplification and guitar effects. In four short years (1966-1970), he contributed to change the way music was made and how electric guitar was played, leaving a permanent mark on the generations of guitarists and musicians that followed. Hendrix's sound is a mix of feedback control and a unique, personal usage of guitar effects which was a breakthrough for its time.

Powered by the award-winning AmpliTube 2 engine featuring proprietary techniques such as DSM™ (Dynamic Saturation Modeling) for achieving the most accurate emulation of guitar amps and effects. IK has gone the extra mile in accurately modeling all the most important components of the Hendrix rig not only using proprietary AmpliTube 2 DSM™ (Dynamic Saturation Modeling) technology at its best, but collecting all the original vintage stomps, amplifiers and cabinets of the same period and fine tuning the software emulations by ear with accurate craftsmanship to achieve incredibly realistic modeling results.
